

The Two Faces of DRONES

Killing the Innocent

Unmanned Aerial Vehicles (UAVs), or ARMED DRONES, are being used by the US military and CIA for the targeted killing of people around the world. Between 2004 and 2012, the CIA conducted over 330 drone attacks in **Pakistan alone, killing about 3,000 people, including 175 children.**

According to a 2012 study titled "Living Under Drones", only **2%** of the victims were high-ranking militants or alleged terrorists; **most of those killed were innocent civilians.** These assassinations without trial take place in six countries, including Pakistan, Yemen and Somalia - countries where the US isn't officially at war.

Drone attacks amount to summary executions **in violation of US and international law.** Targets are chosen from a "**kill list**" compiled by the CIA and approved by the President in secret meetings.

Faulty intelligence, misidentifications and malfunctions are common, and have led to the killing of dozens of innocent people. Obama administration officials admitted in May 2012 that they use **the CIA's definition of a "militant," which is simply "any military-age male in a strike zone."**

Drone attacks violate national sovereignty, stoke anti-American sentiment and prompt violent acts of revenge. They make the entire world a potential war zone. It is foolish to believe drone attacks make us, or the world, safer. **Drones are currently piloted from Hancock Air Base, making the city of Syracuse part of the war zone.**

The Two Faces of DRONES

Domestic Surveillance

Surveillance drones are a significant threat to privacy and civil liberties. Some police now use drones to spy on citizens with no warrant or legal process whatsoever. Drones are capable of highly advanced surveillance, and may carry equipment that includes: live-feed video cameras, infrared cameras, heat sensors, and radar. Some military versions can stay in air for hours or days at a time, and **their high-tech cameras can scan entire cities or follow a car or the motions of a gathering of people from 60,000 feet away.** These drones can determine your location or intercept your texts and phone calls. They also can be made to carry "less lethal" weapons such as tasers or rubber bullets.

Base to operate MQ-9 Reaper surveillance drones in airspace over the Syracuse region.

Surveillance drone use in the United States is set to expand rapidly over the next few years, thanks to a provision in the Federal Aviation Administration (FAA) Modernization and Reform Act of 2012.

The FAA authorized Hancock Air National Guard
